

Acupuncturist in Winnipeg

Acupuncturist in Winnipeg - IV therapy or also known as Intravenous therapy is the placing of substances straight into a vein. IV therapy has been used to correct electrolyte imbalances and in order to deliver medications in blood transfusions. It can even be used as fluid replacement so as to correct, for instance, dehydration. The intravenous route is the fastest method to be able to deliver medications and fluids all over the body. Various medications, as well as lethal injections and blood transfusions, could only be given intravenously.

Vitamin C Intravenous therapy is another treatment for illnesses like cancer. Lots of centers dedicate specific treatment regimens, even though there is still some controversy around this particular type of remedy. Among the reputed benefits of Vitamin C therapy include: increasing the quality of life and prolonging survival. Vitamin C is effective in preventing systemic free radical injury and corrects a deficiency in ascorbic acid, which is often found in cancer patients. Vitamin C inhibits hyaluronidase. This is actually an enzyme made by cancer cells that is responsible for the breakdown of healthy tissue, leading to tumor progression and metastasis. Vitamin C likewise works synergistically conventional with different traditional cancer therapies.

Vitamin C, also known as L-ascorbic acid or L-ascorbate is a really essential nutrient for human beings and many different animals. It acts as an antioxidant and protects the body against oxidative stress. Vitamin C is also a co-factor in at least 8 enzymatic reactions comprising different collagen synthesis reactions that result in the most severe signs of scurvy when they are not working properly. In animals, these enzyme reactions are extremely vital in preventing bleeding from capillaries and wound-healing.

Vitamin C Mega Dosage

There are several organizations and individuals who support large doses of Vitamin C, in excess of 10 to 100 times more than the Recommended Daily Intake or RDI. They take these amounts either orally or intravenous therapy. There have yet to be randomized, large clinical trials on the effects of high doses done on the general population. Linus Pauling spent a large portion of his life supporting the use of mega doses of vitamin C. He believed the established RDA was enough in order to prevent scurvy but not necessarily a high enough dosage for optimal health.

A mega dose of Vitamin C continues to be and has been used to be able to treat and prevent lots of various sicknesses, amongst which include the common cold, cancer and coronary disease. Current recommendations for Vitamin C are anywhere from 30 - 100 mg per day. People taking a mega dose may ingest anywhere from 500mg to 1000 mg a day but the side effect of diarrhoea may be a common problem for individuals who ingest large amounts.
