

Hyperbaric Oxygen Therapy Winnipeg

Hyperbaric Oxygen Therapy Winnipeg - Oxidative therapy is carried out by introducing extra energy inside the body. This could be done in 3 ways: making use of Hyperbaric Oxygen and introducing oxygen in the body under pressure, by an infusion of Hydrogen Peroxide or H₂O₂ into a vein for about one hour or by mixing Ozone gas with blood. It just takes a small amount of Hydrogen Peroxide to produce a large amount of oxygen, thus, areas on the body that suffer from poor circulation can benefit very much from the supply of oxygen.

Oxidative therapy has been made use of since the 1920's, when Dr. T.H. Oliver first utilized Intravenous Hydrogen Peroxide during an epidemic of influenza. This successful treatment helped a lot of patients and the outcome were reported in the Lancet, a British medical journal. A few years after, Dr. Charles Farr published a paper entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This paper has become the protocol for physicians who administer H₂O₂.

The theories surrounding this particular therapy differ in its explanation of the way this treatment works. Some researchers and scientists have discovered that the presence of H₂O₂ within the body is more complicated than initially thought. The benefits of Oxidative Therapy have been show effective for the following health illnesses: Cardiovascular Disease, Cerebrovascular Disease, Cardiac arrhythmia, Coronary spasm, Peripheral Vascular Disease, Asthma, Pulmonary Diseases, COPD, Raynaud's Phenomenon, Influenza, Chronic Bronchitis, Bronchiectasis, Herpes Simplex Virus, HIV, Lupus, Immune Disease, Multiple Sclerosis, Alzheimer's, Fibromyalgia, Chronic Fatigue, Environmental Poisonings, Rheumatoid Arthritis, Migraines, and Parkinson's Disease, among others.

The energy producing chemical reaction of oxidation is important in the body as the body uses different kinds of oxygen. To be able to prevent damage to surrounding normal tissue, treatments should be carefully controlled. Anti-oxidants that come in the kind of vitamins and enzymes will help to protect the body from any damage caused by oxidation. Then again, the immune system uses oxidative energy as a weapon in order to directly kill infectious agents like for example yeast, bacteria, parasites and viruses.
