

Psychotherapy Winnipeg

Psychotherapy Winnipeg - Neural Therapy was initially uncovered by German physicians Walter and Ferdinand Huneke. They gave it the term "Heilanasthesie", that literally means "curative anaesthesia." The name was later changed to "Segmenttherapie" or "segment therapy", before finally becoming "neural therapy," after Huneke. Neural Therapy is a system used to treat and diagnose medical conditions of individuals that are otherwise difficult to treat or resistant to treatment.

The theory around this type of therapy is that trauma can produce long-standing disruptions within the electrochemical function of tissues. Many tissues can be affected comprising nerves, a ganglion, that is a bunch of nerves and scars. There is no scientific proof showing that neural therapy is effective in treating any illness or cancer, although, it has been made use of to treat pain disorders. Neural therapy is practiced mostly within Europe and South America.

History

During the year 1925, the surgeon from Germany Ferdinand Huneke launched a new pain drug which contained a local anaesthetic referred to as Procaine. He tried it on his sister who suffered from severe stubborn migraine. He injected it intravenously rather than the suggested intramuscular method. The migraine attack stopped right away. This response impressed his brother Walter and him. They used Procaine and Novocaine and sometimes mixed it along with caffeine known as "Impletol." This is still used nowadays in migraine medicines. It has been found to be helpful in lots of painful conditions either by IV or local injection.

Ferdinand Huneke then injected during the year 1940, the painful shoulder of a lady who also suffered osteomyelitis in her leg. She was threatened with amputation, because during that time there were no antibiotics available. The leg wound became itchy but the shoulder pain somewhat improved. The next treatment, he injected the leg wound and the shoulder pain immediately vanished. This type of reaction is referred to as "Flash Phenomenon."
